Poetaz Narcissus

The Poetaz Narcissus also are known as Cluster-Flowered Daffodils because they produce several showy flowers atop each stem. This gives them a mass effect in the garden and if cut even a dozen flower stems will make a splendid showing. Cheerfulness, a newer double variety, is particularly recommended for its beauty.

Dreer's Autumn Gardening Guide

Order Early

This year, more than ever before, it is very important that you place your order just as early as possible because the supply of many items is decidedly limited.

The dates given below necessarily must be approximate as they depend upon climatic conditions. Where winter sets in early plant as soon as possible.

September

Plant bulbs of Colchicum just as soon as possible. The earlier they are planted now the better they will be. If you did not sow your new lawn or repair the old one during late August do so now or as soon as possible.

This is the most important month for planting bulbs in the garden to bloom next spring including Narcissus, Anemone, Brodiaea, Calochortus, Camassia, Spring Crocus, Chionodoxa, Erythronium, Leucojum, Lilium candidum, Eremurus, Muscar, Ranunculus, Scilla, Snowdrops, Spring Starflower (Triteleia), and Iris reticulata. Late in the month plant Dutch and Spanish Iris. Start Lilies indoors, also Calla, Baby Gladiolus, Freesia, Lachenalia, Leucojum, Orchis, Ornithogalum, Sparaxis.

Where winter sets in early sow the seed of hardy perennials marked in this catalog * Where winter is a long way off other quick growing perennials can still be started from seed.

October

All the bulbs recommended for September planting can still be started this month as long as the ground is not frozen. But even in colder sections October planting is possible where the soil in the beds has been covered with leaves, straw, corn stalks, or any other loose matter that will keep the frost out until the bulbs are available.

October is the most important month for planting Tulip bulbs.

Just before the soil in the seed bed or cold frame freezes sow seed of the perennials marked with * in this catalog.

By the middle of the month begin your first planting of Paper White Narcissus, Soleil d'Or Narcissus, and Chinese Sacred Lily indoors. Make sure you have sufficient bulbs of these to make succession plantings two weeks apart until mid-March. Then start Gloriosa, the beautiful Climbing Lily, indoors now.

November

Continue planting Lilies throughout this month. There is still a chance to plant the many types of bulbs recommended for September and October planting as long as the ground is (free) from frost. Continue planting tender bulbs indoors for flowers during late winter and early spring.

December

Throughout December start bulbs of Paper White Narcissus, Soleil d'Or Narcissus, Chinese Sacred Lily, Amaryllis, and all tender bulbs for blooming indoors in the house.

25 bulbs or more are priced at the 100 rate, except where noted otherwise.

40-540 **Ixioides odorata.** An excellent bulbous plant for growing indoors. Requires the same general growing conditions as Freesias such as a temperature of 55 to 65 degrees F. Produces its lovely, large, star-shaped blooms in February and March, carrying 4 to 6 slightly fragrant, light blue flowers with white markings in the center on strong, wiry, 12 inch stems. The blooms last for 3 to 4 weeks. *Top size bulbs:* 3 for $36c; 12 for $1.25; 25 for $2.00.

40-542 **Jumbo Bulbs:** 3 for $30c; 12 for $1.75; 25 for $3.00.

**Bulb Forcing Hints**

Paper White Narcissus, Chinese Sacred Lily, and Soleil d’Or Narcissus are very popular for winter flowering indoors because they require little care. Amaryllis are favorites for the same reason though their normal blooming season falls into early spring rather than winter.

In addition to the kinds listed under "Bulbs for Winter-Flowering in the House," several hardy bulbs may be grown indoors for late winter or early spring blooming such as Chionodoxa, Calochortus, Crocus, Iris reticulata, Muscari, Scilla campanulata, and Snowdrops.

Success depends to a large degree upon providing suitable temperature such as 40° F for root formation, 50° F for the development of leaves and stems, and 60° F when the flower buds appear.

---

**Ornithogalum**

40-840 **Arabicum** (Arabian Star of Bethlehem). This will give good results if grown in any cool room. A showy species with large white flower petals and a black-green center button. Grows 1 to 2 feet tall. Exquisitely scented blooms. Hardy outdoors with protection where winters are not too severe. 3 for 30c; 12 for $1.00; 25 for $1.75.

---

**Sparaxis—Wandflower**

40-880 **Tecolote Mixed.** Brilliantly colored bulbous plants from the Cape of Good Hope. Plant any time from October to December using rich light soil in the pots. Also suited to outdoor growing in the coldframe. 3 for 20c; 12 for 65c; 25 for $1.00.
Early autumn is a favorite time with many gardeners to sow perennial flower seeds. To hasten them along a cold frame or a similar temporary structure should be used. Those marked * give best results if the seed is sown late in the fall. They need the action of frost to sprout freely during the coming spring.

To help our customers in selecting varieties for the rock garden we have used the symbol △ to identify them at a glance. These varieties also are splendid for dwarf beds, borders, or for edgings. Plants suited to semi-shade are marked ○, and those that will grow in deeper shade ◊. Practically all of these also do well in a sunny position.
